8 Checkpoints...

...that you should watch out for when buying pressure gauges!

1. Can the manufacturer implement your customer-specific requirements into individual solutions or do you have to be satisfied with a few standard gauge types?
2. Do you get reliable answers to your questions within 24 hours or is this service not available to you?
3. Does your supplier work in a long-term resource-saving way, proven by EcoVadis certification (sustainability certificate)?
4. Does your manufacturer offer personal contact persons with maximum friendliness and first-class service for services and products?
5. Does the manufacturer offer a cost effective and guaranteed spare parts supply and certified repair service or do you put yourself in an expensive dependency due to missing reparability?
6. Do your existing pressure and temperature measurement devices meet the highest requirements for reliability and availability even for the most demanding applications or do you have to expect unplanned downtimes and long delivery times?
7. Does your investment pay off over a long period of time (life-cycle costs) or do cheap purchase prices also bring high operating costs (maintenance, service, reparability)?
8. Do you choose a reliable and continuously managed company is the manufacturer dependent on short-term oriented actions, for example by investors?
